

Little Medical School **Heart, Lungs, & Digestion: Grades K-5**

Little Medical School brings medicine, science, and the importance of health to children in an entertaining, exciting, and fun way. Hands-on activities, games, and crafts give kids the opportunity to learn how the body works while having fun. In this 6-week course, students receive their own working stethoscope and learn how the heart works. They will make a model of a lung, participate in an activity to act out the digestive process, learn how to suture when they role-play a surgery, and much more! Children receive a diploma when they graduate at the end of the course. *\$20 material fee is included in price.
